Re: Wolverine Worldwide, Inc. – MDOT Property Soil Verification Sampling Work Plan

Dear Ms. Hendershott:

Based on our on-going discussions with you regarding verification sampling at the MDOT property, Rose & Westra, a Division of GZA GeoEnvironmental, Inc. (R&W/GZA) is presenting this Work Plan (WP) on behalf of Wolverine WorldWide, Inc. (Wolverine). This WP pertains to the property owned by MDOT located on the south side of House Street NE, commonly known as 1758 House Street ("Site"). R&W/GZA, on behalf of Wolverine, removed debris from this property including leather scrap, bottles, metal, rusted drums, and leather dust from October 11 to October 17, 2017. This WP outlines the planned soil verification sampling for this Site.

The floor of the excavation is approximately 4500 square feet ( $\text{ft}^2$ ), since the excavation was conducted in a ravine and the "sidewalls" are considered as part of the floor. Based on the document "Sampling Strategies and Statistics Training Manual" published by the MDEQ in 2002, the recommended number of floor samples is seven. The sample locations will be biased to the areas that appear most likely to have remaining impact, if any.

Soil samples will be analyzed for the following parameters:

- Arsenic, Barium, Chromium, Hexavalent Chromium, and Lead using U.S. EPA Method 6010B;
- Perfluorinated Sulfonic Acids and Perfluorinated Carboxylic Acids by U.S. EPA Method PFC/537M (analyte list attached); and,
- Volatile Organic Compounds (VOCs) by U.S. EPA Method 8260B.

Waste characterization samples from the Site had detections of barium. Waste characterization samples from the nearby Lenderink property had detections of barium and lead. Chromium is present in leather. Previous soil samples from the Site soil had detections of Perfluorooctanoic Acid (PFOA), Perfluorooctane Sulfonic Acid (PFOS), N-Methyl perfluorooctane Sulfonamide (MeFOSA). Previous soil samples from the Lenderink property nearby had detections of Perfluorohexane Sulfonic Acid (PFHxS), Perfluorooctane

MDOT Property Soil Verification Sampling – Work Plan  
Page / 2

Sulfonamide (FOSA). All of these compounds are included in the analyte list. Analytical results from the waste characterization and soil sampling are attached for reference.

As part of the sampling, R&W/GZA will also collect nine soil samples from the undisturbed portion of the Site to analyze for background arsenic concentrations. These samples will be collected in the area shown on the attached figure. Based on the Kent County Soil Survey, the soils in the proposed area are the same type (Chelsea loamy fine sand) as the soils in the area where the waste was removed.

R&W/GZA anticipates conducting this sampling in the spring of 2018.

We look forward to your response.

Sincerely,

Rose & Westra, a Division of GZA GeoEnvironmental, Inc.

Grand Rapids, MI 49504

**RE: 16.0062335.53 / 16.0062335.53 TO1**

Dear Lori,

Enclosed are the results of the sample(s) submitted to our laboratory October 21, 2017  
For your reference, these analyses have been assigned our service request number **K1711468**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at [www.alsglobal.com](http://www.alsglobal.com). All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3275. You may also contact me via email at [Chris.Leaf@ALSGlobal.com](mailto:Chris.Leaf@ALSGlobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

A handwritten signature in black ink, appearing to read "C. Leaf".

CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

### Inorganic Data Qualifiers

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

### Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

### Organic Data Qualifiers

- \* The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.  
*DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

### Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

**ALS ENVIRONMENTAL**

<b>Client:</b>	GZA GeoEnvironmental, Incorporated	<b>Service Request No.:</b>	K1711468
<b>Project:</b>	16.0062335.53 TO1	<b>Date Received:</b>	10/21/17
<b>Sample Matrix:</b>	Soil		

**Case Narrative**

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Control Sample (LCS), and Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

**Sample Receipt**

Three soil samples were received for analysis at ALS Environmental on 10/21/17. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

**Perfluorinated Sulfonic Acids and Perfluorinated Carboxylic Acids by HPLC/MS****Calibration Verification Exceptions:**

The upper control criterion was exceeded for N-Methyl perfluorooctane sulfonamide (MeFOSA) and N-Ethyl perfluorooctane sulfonamidoethanol in the Continuing Calibration Verification (CCV) associated with several samples. There were no detections reported for these analytes from the associated field samples. Since the apparent problem indicated a potential high bias, the data quality was not affected. No further corrective action was required.

**Surrogate Exceptions:**

The upper control criterion was exceeded for several surrogates in sample SS-03. The associated native analytes were not detected in this sample. Assuming the native analytes performed similar to the labeled analogs, the effect on the reported results was minimal. The quality of the sample data was not significantly affected. No further corrective action was appropriate.

**Elevated Detection Limits:**

Sample SS-03 required dilution due to matrix interferences that caused suppression of the instrument internal standard. The detection limits were adjusted to reflect the dilution.

No other anomalies associated with the analysis of these samples were observed.

Approved by

Results flagged with an asterisk (\*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

RE: 16.0062335.51

Dear Lori Powers:

Order No.: 1710031

BIO-CHEM Laboratories, Inc. received 2 samples on 10/5/2017 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications except where noted in the Case Narrative.

If you have any questions regarding these tests results, please feel free to call.

Please note that unless otherwise instructed, residual samples will be held for sixty (60) days from the original report date. At that time, all non-hazardous samples will be disposed of in accordance with federal, state and local regulations and ordinances, and hazardous samples shall be returned to you. Please contact the laboratory within thirty (30) days if other arrangements for sample retention need to be made.

Sincerely,

A handwritten signature in black ink that reads "Cindy Euwema".  
Cindy Euwema

**CASE NARRATIVE**

Samples are routinely analyzed using methods outlined in the following references:

- (SW) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Ed.
- (E) Methods for Chemical Analysis of Water and Wastes, EPA-600/4-79-020.
- (A) Standard Methods for the Examination of Water and Wastewater, APHA, 18th Ed.
- (D) Annual Book of ASTM Standards.

Specific methods utilized for this project are provided in the analytical report and are identified by the reference document abbreviation ( ) followed by the method number.

All QA/QC and sample analyses met method, laboratory and/or regulatory data quality objectives unless otherwise specified below.

RE: 16.0062335.53 T01

Dear Bryan Rose: Order No.: 1710107

BIO-CHEM Laboratories, Inc. received 3 samples on 10/20/2017 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications except where noted in the Case Narrative.

If you have any questions regarding these tests results, please feel free to call.

Please note that unless otherwise instructed, residual samples will be held for sixty (60) days from the original report date. At that time, all non-hazardous samples will be disposed of in accordance with federal, state and local regulations and ordinances, and hazardous samples shall be returned to you. Please contact the laboratory within thirty (30) days if other arrangements for sample retention need to be made.

Sincerely,

A handwritten signature in cursive script that appears to read "Cindy Euwema".  
Cindy Euwema  
Office Manager

**CASE NARRATIVE**

Samples are routinely analyzed using methods outlined in the following references:

- (SW) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Ed.
- (E) Methods for Chemical Analysis of Water and Wastes, EPA-600/4-79-020.
- (A) Standard Methods for the Examination of Water and Wastewater, APHA, 18th Ed.
- (D) Annual Book of ASTM Standards.

Specific methods utilized for this project are provided in the analytical report and are identified by the reference document abbreviation ( ) followed by the method number.

All QA/QC and sample analyses met method, laboratory and/or regulatory data quality objectives unless otherwise specified below.

---

No data qualifications required.
